TANDEM TSM 2M II Cassava Up-Rooter

The Tandem TSM cuts the soil under the cassavas horizontally, loosening the soil completely and homogeneously. This loosening allows easy lifting of the root bunches (regardless of the soil condition), drastically reducing losses and guaranteeing supply to industries, even during the dry season. The exclusive rods in tandem provide a perfect finish of

the soil, leaving ready for replanting.

The TSM is indicated for cassava harvesting in plantations with spacing of up to 90 cm between the lines.

TANDEM TSM 2F Cassava Up-Rooter

It comes equipped (optional) with the exclusive polythylene laminated TSM II/E Blades to allow better soil drainage, with rear rods which lift the roots to the surface and individual knives which allow smaller replacement cost, released as a new option for those seeking better cost-benefit relationship.

Model	Number of Lines	Rods	Total Weight	Power Minimum
TSM 2F	2	Double rods with Bolt-Fuse	330 kg	80 hp
TSM 2F II	2	Double rods with Bolt-Fuse	398 kg	80 hp
TSM 2F II/E	2	Double rods with Bolt-Fuse	438 kg	80 hp
TSM 2M	2	Double rods with Shock Control	382 kg	80 hp
TSM 2M II	2	Double rods with Shock Control	450 kg	80 hp
TSM 2M II/E	2	Double rods with Shock Control	490 kg	80 hp
